

AMAZON VPC

CRIANDO UM VPC PEERING ENTRE 2 VPC'S DIFERENTES

No laboratório da **CloudFaster Academy**, aprendi a criar VPCs, sub-redes e VPC peering pelo console. Além disso, aprendi a editar tabelas de rotas, criar instâncias em ambas as VPCs e configurar regras para permitir o tráfego ICMP na EC2.

Também explorei o acesso as instâncias via terminal SSH no Linux ou através do PuTTY no Windows, realizando testes para verificar a comunicação entre as VPCs.

The screenshot displays the AWS Management Console interface. On the left, the 'Instâncias' (Instances) menu is expanded. The main panel shows a list of instances with columns for Name and ID. The instance 'ec2-lab-vpc-B-peering' (ID: i-092bd3d6082cbe25b) is selected. Below the list, the 'Resumo da instância' (Instance Summary) is visible, showing details like ID, IPv6 address, host name, and instance type (t2.micro). An overlay terminal window shows a successful SSH login to the instance. The terminal output includes the AWS Linux 2023 banner and a series of ping tests from 10.27.129.88 to the instance's private IP (10.27.129.88), all of which were successful with varying response times.

Name	ID da instância
ec2-lab-vpc-A-peering	i-027df7af76960063a
ec2-lab-vpc-B-peering	i-092bd3d6082cbe25b

Instância: i-092bd3d6082cbe25b (ec2-lab-vpc-B-peering)

Resumo da instância

- ID da instância: i-092bd3d6082cbe25b (ec2-lab-vpc-B-peering)
- Endereço IPv6: -
- Tipo de nome do host: -
- Nome do IP: ip-10-27-129-88.ec2.internal
- Nome do DNS do recurso privado de resposta: -
- Tipo de instância: t2.micro
- Endereços IP elásticos: -

```
ec2-user@ip-10-25-8-16:~$ ping 10.27.129.88
PING 10.27.129.88 (10.27.129.88) 56(84) bytes of data:
